### Step 1: Crabgrass Preventer Plus Fertilizer

Step® 1 prevents crabgrass before it can germinate. It also feeds to green up a winter-weary lawn.

### Lime

Lime counteracts acidity of soil and restores depleted nutrients, so fertilizers work more efficiently, saving you money.

### Grass Seed

Use for new lawns or patching. Grows quicker, thicker, greener grass guaranteed!

### Step 2: Weed & Feed

Step® 2 builds thick, green turf from the roots up and kills many broadleaf weeds like dandelions, while feeding and nourishing the lawn.

### Step 3: Summer Stress

Give your lawn a mid-season boost with an application of Step® 3 to feed and strengthen the lawn against heat and drought.

### Step 4: Fall Fertilization

An application of Step® 4 greens up the lawn now and helps strengthen and protect it for a better lawn next spring.

### Winterization

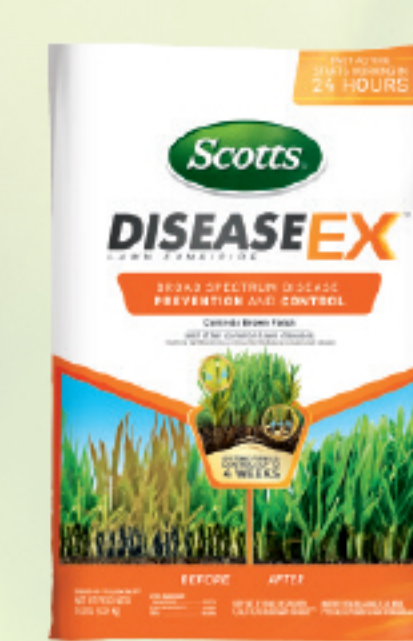

Improves lawn's ability to absorb water and nutrients.

Grub Control

Insecticide

Fungus Control

Moss Control
